

Steel thermos

A high-quality steel thermos with excellent heat retention. The thermal insulation is based on a vacuum formed inside the double-wall construction. The thermos is made from SUS 304 steel, which meets the European requirements for food safety. Two caps included in the package. One of the caps ensures optimal heat retention for when you want to keep liquids either very hot or very cold for a long time on the move. In turn, the quick-stopper is at its most convenient in regular everyday use. No glass components that could shatter. Available in two color options: dark blue or dark red.
