Airam SmartHome LED set

The SmartHome Teno LED sets are part of the Airam SmartHome product range. You can use these versatile light sets to decorate your yard from autumn until spring. The lights can be controlled and scheduled with a mobile app from the comfort of your couch, for example! The LED set also includes a control unit, if you don't want to use the app to control the lights. The control unit can be used to control various functions of the light set, but you will need to use the SmartHome app for fine-tuning the programmable settings. Download the free, easy-to-use Airam SmartHome app, which can also be used to dim and schedule the lights, from your app store. Airam SmartHome works through your home Wi-Fi network without needing additional devices. The SmartHome Teno LED set is available in a 15-meter and 30-meter version! The LED set is packaged in a durable plastic case that can be used for storage during the summer, for example.
