

1.2V AAA 300mAh Ni-MH

Solar hanging lantern

A traditional ball-shaped hanging lantern with a white textile surface and a metal support frame. There are two size options: Ø 20 cm and 30 cm. These lanterns look especially lovely when several of them are arranged in a group! The solar cell is in the upper part of the lantern. Avoid placing the balls too close together, as the automatic dimmer switch may prevent the other ball from lighting up. Each lantern contains 1 white LED light source. The lanterns are flattened in the package – stretch them into shape and set the metallic support part in place before use.
